

## SLUDGE SLAMMER™

---

# MEOR

### Tank Cleaning

Sludge Slammer™ is a concentrated reliquification product using the most innovative chemistries available in breaking down heavy tank sludge in storage tanks. Sludge Slammer™ is also designed to re-mediate petroleum based compounds such as oil and grease, distillate fuel oils, residual oils, lubricants, and other products resulting from the straight distillation of crude oil, distillation of unfinished petroleum derivatives, cracking and other petroleum processes.

### How it works

Sludge Slammer™ reliquifies the hydrocarbon chain in the deposit on contact, reducing the heavy asphaltene and paraffin deposits within the sludge. This process makes it into a more easily transferable state. Profits increase greatly because of the reduction in time required to clean a typical storage tank.

### Applications

- Oil storage tanks (cleanup & reliquification)
- Oil Tankers
- Refinery equipment
- Oil rigs
- Gas & diesel to combustible, combustible to crude, crude to crude
- Sludge pits
- Wellheads
- Concrete surface cleanup
- Oil / grease cleanup

### Benefits

- Does not require removal prior to refining
- Does not require heating of the oil in flow lines
- Save large sums of money in processing
- Increase oil well production
- Reduces Viscosity (up to 74%)
- Convert Sludge Into Secondary Oil (up to 80%)
- Rapid Results
- Non-toxic – personnel safe
- No Hazardous Product Handling
- Raises API Gravity (up to 3x)
- Environmentally friendly
- Reduces pumping fees
- Reduces under deposit corrosion
- Reduce's clean-up time by up to 2/3's.
